some for themselves as their perquisite. They then drove the cattle to pasture, and this might be some distance away when grass was scarce in the dry season. They sometimes drove the cattle back near the village to rest at noon under the shade trees, but if the pasture was far away the cattle rested there and went on feeding later. They were brought back to the kraal in the late afternoon and counted by one of the senior men.

The herd-boys taught each other to fight with sticks, to wrestle, to catch rats and small birds, to use the knobkerry, catapults, and bows and arrows. Sometimes in the afternoon they went to other villages and challenged another herd to a fight between bulls.[1] During the long day's herding, the boys used to drink milk, make *amasi* (milk curds) in a gourd and eat it, bake birds in clay and roast ears of maize taken from their mothers' grain stores. Precedence among the herd-boys depended first on age and only secondly on the rank and position of the families they belonged to. There was an easily recognizable air of authority and almost of arrogance among the older boys responsible for their fathers' and uncles' cattle. They superintended the process of letting out the cattle, milking them, driving them to pasture and the return to the kraal in the evening. Mounted on donkeys, wearing large straw hats made by themselves, the senior boys acted like ranch owners bossing up inefficient work hands.

This period of living in the *laweni* was, as we have seen, shared by boys of a wide age group. In a large village where there were two or three or four *laweni*, there was often one in each section, which generally meant that the boys belonging to one *banja* or section shared one *laweni*. This had the effect of dividing them up to some extent on a basis of family and rank, but in a *laweni* serving a whole village all the boys went in together whatever families they came from. There was no respecting of clan status in the *laweni* and young boys of high-ranking families had to wait on and obey older boys of lower rank. *Laweni* life was therefore a democratizing influence among the boys of the village, and no boys were excused from herding cattle because they belonged to a house which owned cattle. Even if some went to school and others did not, the school-boys had to take their share of herding in the holidays. Ngoni chiefs and leading men laid great emphasis on keeping the boys busy and making them carry out the work allotted to them. The older boys began to listen in at court cases and to discuss them among themselves. During the wet season from time to time they formed hoeing parties for clearing new ground and for the periodical weeding of gardens. They seldom did any continuous cultivation, as the women and the older men did, and a boy who liked to go off and hoe by himself was pointed out as one with rather peculiar tastes.

During this period of *laweni* life, when in addition to herding the

an adequate garden for his wife. He may clear a fresh garden on rejuvenated land, or enlarge his own or his wife's garden, depending on how they are placed. It is usually not until much later in the marriage that a man starts a garden of his own, distinct from the one nominally owned by his wife. The work of clearing a new place for a garden is not, among the Ngoni, necessarily a man's job, and can be undertaken by a woman alone if she has no man to assist her. If the husband is present, he does most of the tree felling, and his wife breaks up the new ground with her hoe.

The planting, weeding, and cultivating are all done by both men and women, and during the wet season a man goes to the garden with his wife early in the morning and they both work there until they are tired. Later, when the growing crop has to be protected against monkeys by day and wild pigs by night, they both spend long hours on watch in the garden shelter. At harvest, both cut down the maize and lift the ground crops, but only the woman can carry the produce to the village. If the man helps, it is by bringing a cart or sledge and taking home a large load pulled by oxen.

In the other subsistence pursuits of animal husbandry and hunting, there is no co-operation between husband and wife until the animals have been killed, when the woman has to cook the meat. Hunting is entirely a male occupation, and animal husbandry largely so. If a man goes away on a journey, he leaves his cattle in charge of his son or brother or father rather than with his wife. If there is no trustworthy man available, then they become his wife's responsibility, but all she in fact does is to see that the senior herdboy reports to her every evening about the state of the beasts. Small stock such as goats and sheep and pigs may be looked after entirely by the wife, and chickens are likely to be in her care.

A man looks to his wife to feed him, and it is considered a reflection on her industry if he does not get enough and has to hang about when his companions are eating in the hope that they will invite him to join them. She feeds him within the exigencies of the food-supply, which often involves semi-starvation in February and March. She is expected to cook competently, and if a woman continually burns the porridge which forms the basis of every meal, there will be strife between her and her husband. If she proves to be a really bad cook her husband may send her home again to be taught properly.

Beer-brewing is the work of women, and is a process lasting at least six days even after all the correct ingredients have been mustered. There is some variation with status in the extent to which husbands require their wives to brew beer, and it is in any case a matter in which the woman can take the initiative. Important men and chiefs who have many visitors like to be able to offer beer to their guests, so that queens spend much time brewing. But common men need to conserve their food supplies more carefully, and know that their visitors will be disappointed but not surprised if there is no beer. A woman sometimes brews to sell the beer and gain money to buy herself clothes, if her husband has no money to give her.

352 Beds are owned in general by the younger generation only, and then at the rate of one per household. Otherwise, everyone sleeps on the floor on a reed mat. During the day, the mat is rolled
285 up except when needed for drying flour in the sun. These mats are made from reeds that grow near streams. The reeds are split in four, and are threaded with a thin rope made from the inner bark of the nzizi tree. Wooden headrests are now a rarity, and if any
513 headrests at all is used, it is a European pillow. Blankets, quilts
[77] and, less frequently, sheets, are bought from stores.

412 The chief tool for use in the garden is the hoe. Ruins of fur-
[325] naces for smelting iron ore are still to be seen, but are not now used,
[567] and are said to have been worked in the old days only by Chewa slaves. Hoe blades are bought in the stores, and hafted with a handle made in the village. Handle making is a man's job, but one that every man knows how to do. Axes are made from blades bought in the store, or else from a worn down hoe blade, with a home-made handle. Adzes are used for mortar making, and young boys make miniature adzes as toys. A pointed blade hafted on to the end of a straight handle is used for making holes in the ground when building.

493 Sledges and, less commonly, unarticulated carts with solid
[241] wheels are made for transporting the harvest from the fields to the village, and for collecting firewood. These are pulled by cattle,
[493] not always oxen, using simple yokes made of wood and sinew, with a wooden drawbar.

224 Hunting is carried on in the dry season, particularly towards
411 the end, when the grass burns easily. Guns of varying degrees of antiquity are used, but none of these are made by Ngoni, although the Chewa still make guns. On a hunt, the rank and file are armed with throwing spears and knobkerries. The gun carriers walk about
224 two hundred yards in front of the main body, who are spread on a single line at right angles to the line of advance. The leader of
